Name:

Fender Jave

Please describe the difference between creating a website using an Application such as Adobe Dreamweaver and a Content Management System such as WordPress.

Creating a website in a content management system such as WordPress allows the user to make changes live, compared to Adobe Dreamweaver where the changes the user makes have to be uploaded to a new host.

Please explain why an image created for the web is a compressed file format such as a .png, .gif, .jpg instead of an application based file such as a .psd.

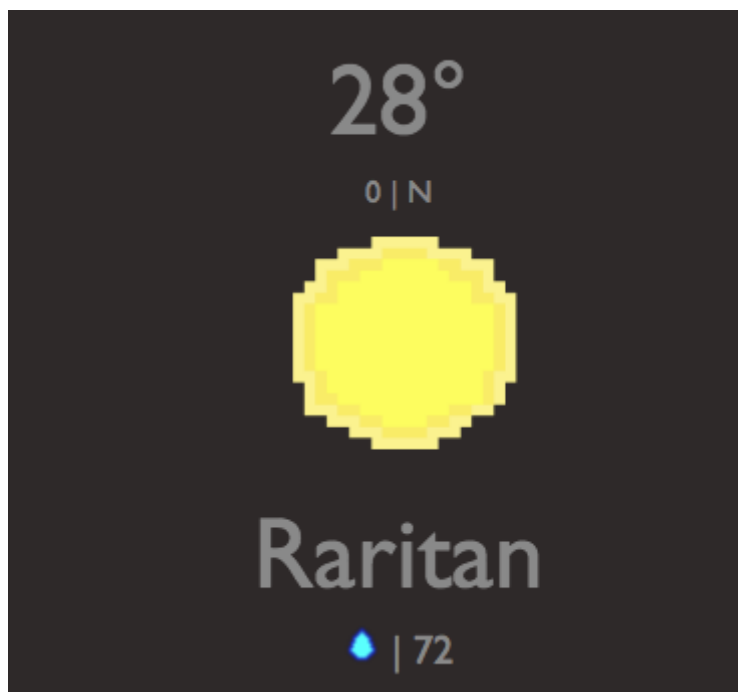

.psd files are heavier than .png or other files, which will cause delays on a website. .png files can also re-sized and it will make easier to load in websites.

Please explain the process Fender may have used to make give his logo this special effect.

I used a shadow effect in each layer for this logo, the process was made in Figma.

Please explain in your own words the method we used to get our webpages to display the current weather.

We used a js code, taking information from a current API.

Create an Animated Gif based on New Year's 2023
