Hannah Otto

Please describe the difference between creating a website using an Application such as Adobe Dreamweaver and a Content Management System such as WordPress.

Using an application like Dreamweaver allows you to create the website completely from scratch by using HTML or any other type of codes. Using a content management system like Wordpress makes it much easier because you don't have to write out the code, it is already done for you.

Please explain why an image created for the web is a compressed file format such as a .png, .gif, .jpg instead of an application based file such as a .psd.

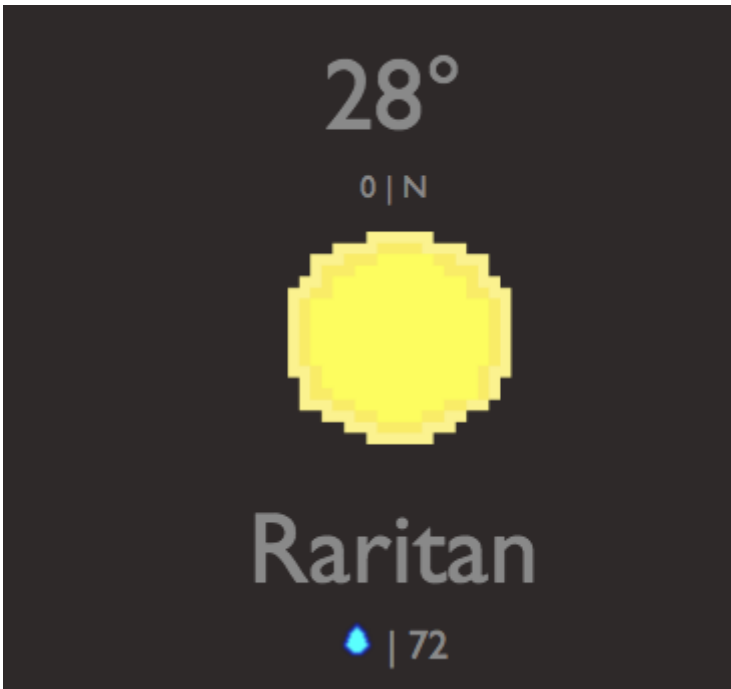

You use a compressed file because it is smaller than a .psd file and some websites cannot transfer the data in a .psd file.

Please explain the process Fender may have used to make give his logo this special effect.

He may have created one side of the logo, duplicated it, rotated it and then applied a drop shadow effect to it.

Please explain in your own words the method we used to get our webpages to display the current weather.

We added a javascript code to our websites and created images that corresponded with the different types of weather that went along with the javascript code. We were also able to change the location by changing the zip code in the javascript.

Create an Animated Gif based on New Year's 2023
