Jillian Verga

Please describe the difference between creating a website using an Application such as Adobe Dreamweaver and a Content Management System such as WordPress.

Dreamweaver is primarily used to create webpages such as HTMLs through CSS pages and other outputs to build the page. WordPress has the ability to create pages while also having the ability to manage websites.

Please explain why an image created for the web is a compressed file format such as a .png, .gif, .jpg instead of an application based file such as a .psd.

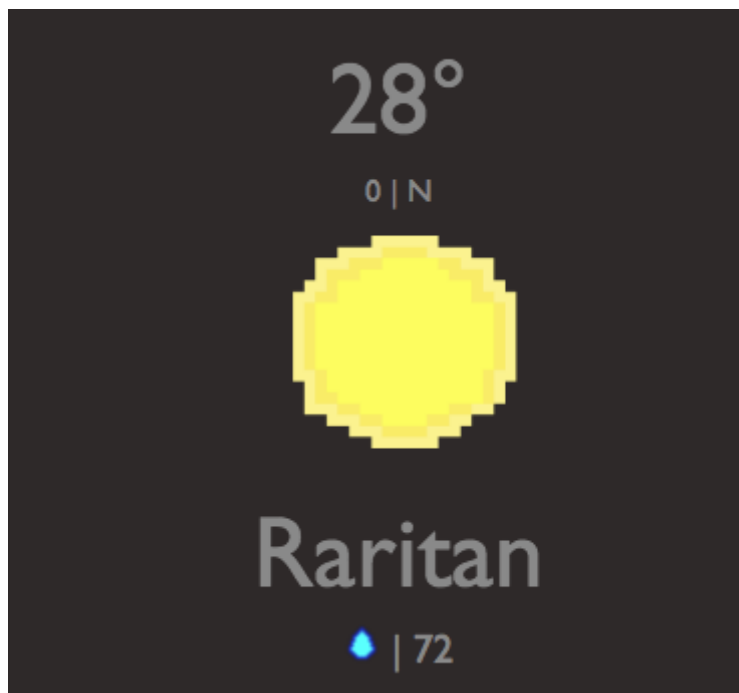

PNG, GIF, & JPG are displayed as digital images while PSDs are documents that have a different exported format.

Please explain the process Fender may have used to make give his logo this special effect.

Fender most likely used a series of stroke levels (darker on certain lines) or had used a shadow effect to give the appearance of an imprinted letter.

Please explain in your own words the method we used to get our webpages to display the current weather.

we had linked the weather based on our location in dreamweaver, while labeling certain images to match the data of the online weather so that our image would match and switch correctly with the corresponding weather outside.

Create an Animated Gif based on New Year's 2023
