Matthew Redzinski

Please describe the difference between creating a website using an Application such as Adobe Dreamweaver and a Content Management System such as WordPress.

Dreamweaver is much more hands-on, there isn't as much guidance and nothing is really done "for" you. In Dreamweaver, you're building a website using your own code from the ground up, while on WordPress, you're able to choose from templates, drag-and-drop different widgets, and create a website with little-to-no personal code. Dreamweaver offers more freedom at the cost of a higher skill ceiling while WordPress offers a simple, fairly effective way to make a website for anyone.

Please explain why an image created for the web is a compressed file format such as a .png, .gif, .jpg instead of an application based file such as a .psd.

Application-based files are only meant to be opened to further edit the file before exporting. compressed files such as pngs, jpegs, and bmps are designed to be used in different ways, and can be used situationally. .gifs are for animated files, .pngs offer transparency, and so on. application files are not able to be opened on the web, which is why they need to be exported into one of those compressed formats before being used,

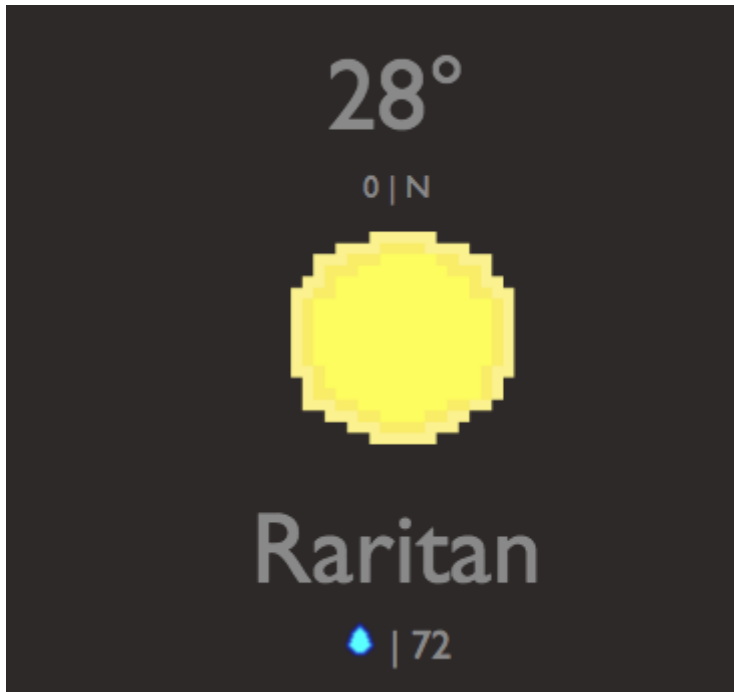

Please explain the process Fender may have used to make give his logo this special effect.

He could have used some sort of outer glow, drop shadow or bevel to create the visual of a relief, or a combination of them. All of those effects can be selected in adobe photoshop or adobe illustrator, and can be tweaked for intensity, opacity and masking style.

.....

Please explain in your own words the method we used to get our webpages to display the current weather.

the weather widget was added by first implementing the base code to any location on our website. After the base was added, we would substitute the placeholder images with our own to show different images for different weather patterns. If it was raining, it would have its own personalized icon to show it was raining. The location in which the weather is being monitored would have to be substituted as well, in this case the location used was Raritan.

Create an Animated Gif based on New Year's 2023
