Samantha Locandro

Please describe the difference between creating a website using an Application such as Adobe Dreamweaver and a Content Management System such as WordPress.

Applications such as dreamweaver require a html script to create the page and theres more creative freedom. Content Management systems like WordPress are a bit stricter as you have to follow a template but it is a bit easier to navigate (in my opinion) and manuver content. Dreamweaver requires an external server to make live and wordpress can stay live and workable.

Please explain why an image created for the web is a compressed file format such as a .png, .gif, .jpg instead of an application based file such as a .psd.

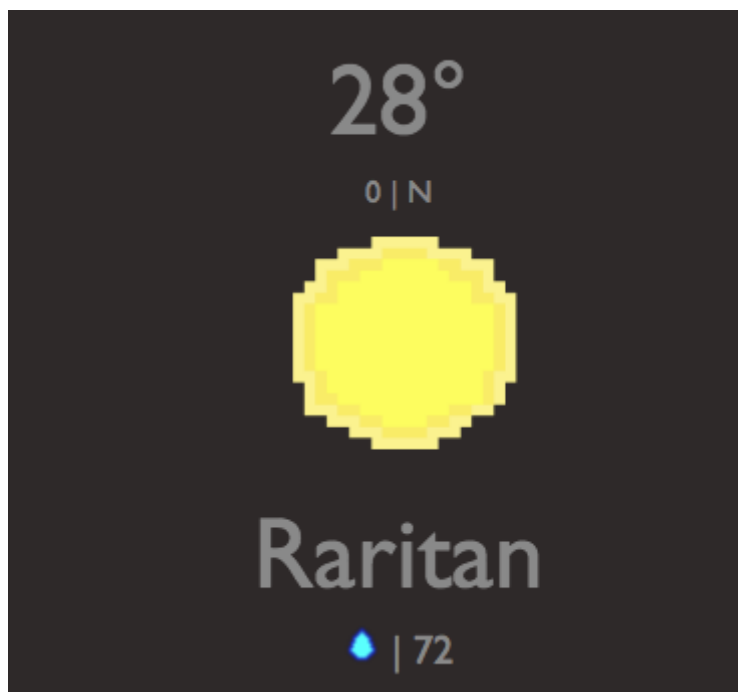

PSD files are too big to be used as imagery, the file holds a lot of information about its creation. Compressed files just hold the visual elements and and function on most devices.

Please explain the process Fender may have used to make give his logo this special effect.

Fender would have created the logo and used the 3D function in illustrator.

Please explain in your own words the method we used to get our webpages to display the current weather.

We linked the page in dreamweaver to dreamhost. In the file in dreamhost we uploaded the imagery we made to depict the weather.

Create an Animated Gif based on New Year's 2023
